DATA TECHNOLOGY

ACD Phone ... phone with the handheld

Practical additional value

By using an integrated UMTS/GPRS card as well as a WPAN module it is now possible to make telephone calls via GSM mobile networks with the handheld M 250. SIM cards of different providers can be used. To keep your hands free (for example to pick sth up.), the light headset communicates via WPAN (Wireless Personal Area Network) with the terminal.

Multifunctional use

The compact handheld recommends itself especially for employees of the following business areas: Logistic, trade and production, where harsh conditions require robust hardware. With the ACD Phone, the employees are accessible all the time and problems or differences can be solved without leaving place of action.

Fast and flexible

Synchronise your material and data flow by online communication between mobile computers and the network of your ERP or warehouse management system. ACD terminals communicate with up to 54Mbit/sec in modern WLAN networks according to IEEE 802.11 a/b/g or via a GSM/GPRS mobile network. This enables you to perform real time stock management, as well as flexibility in service and a permanent monitoring.

ACD Phone

- Phone calls via GSM network
- Dialing via keyboard or touchscreen
- Phone directory
- WPAN headset
