

## **AUTOMATION**

### **MARA Multifunctional goods issue system Simple drawing via pick by light**

The multifunctional goods issue system is modular built and therefore suitable for flexible applications. The handling of the system occurs via pc or mobile data acquisition terminals by ACD. The user applies for the system and according to his authorities he will be able to pick the goods. This occurs via pick by light. A mechanical unlocking service opens the right box. This will be announced via pick by light. Simultaneously the picking goods and personal data will be recorded.

The goods issue system can be used as consignment stock with an automatical supplier connection. A data link to existent ERP systems is possible.

You can also use the system to return goods.

#### **MARA**

- Pick by light for drawers and boxes
- Access via pin / keyword / rfid
- Safe-keeping
- Control via terminal / mde / pc
- Different grid possibilities for drawers

**ACD GROUP ...to get things moving!**

## AUTOMATION

### MARA

**Multifunctional goods issue system  
Simple drawing via pick by light**

#### Design:

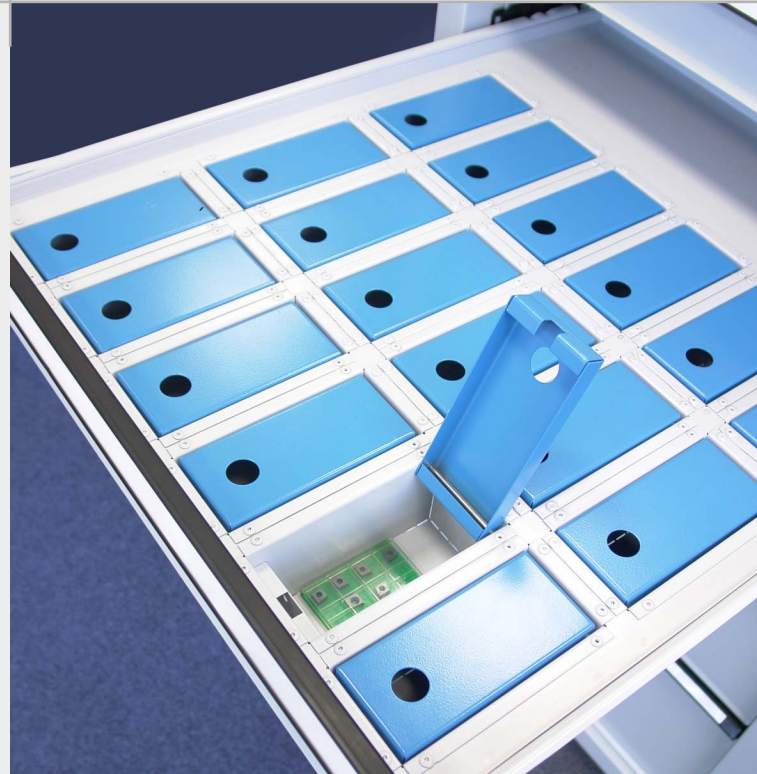

- Designed from coated steel panels; stainless steel option is possible (medical science, foods)
- Foundation for easy transport via hand lift
- Alignment of hand wheels for an optimal standing
- Emergency release is possible via key switch
- Drawers available with different heights

#### Range of applications:

- Logistics for small parts
- Medical science and care
- Electronics

#### Different grid possibilities:

- Basic grid with maximal 36 boxes per drawer.
