

Flexible and ergonomic! The new products from ACD Elektronik

M270SE now with camera

Our tried-and-tested M270SE handheld impresses above all with its robust and ergonomic design and its clear quick-entry keypad. Thanks to the in-house Android™ Industrial+ operating system, a high level of data security guaranteed. To make our logistics all-rounder even more flexible, an optional 5 MP autofocus camera with lighting is available with the latest version of the M270SE.

This further expands the handheld's range of applications. For example, it can now be used for complaints management or documentation in incoming and outgoing goods. The M270SE with integrated camera can be combined with the M270SE variants with 2D shortrange imager SE4750SR, 2D midrange imager SE4750MR and 2D advanced ranger imager SE5500. Despite the integrated camera, the handheld remains compatible with almost all existing accessories such as docking stations, bags, holders, etc. To ensure that the M270SE can continue to be integrated quickly and easily into the respective individual customer application, we use the familiar standard Android™ interfaces, which of course also applies to the camera.

Electric Height Adjustment for our MAX BE

There is also a new feature for our MAX BE Mobile Workstation: the Electric Height Adjustment, which can be used in combination with the large B700 table top. This makes it easy to adjust the Mobile Workstation to different body heights, quickly and effortlessly.

The Electric Height Adjustment has a load capacity of up to 60 kg and impresses with a clearly arranged control unit. Furthermore, up to four positions can be saved, making it even easier to set the correct height for the respective employee during operation. The height adjustment for the MAX BE with B700 table top is certified and approved and can also be retrofitted by ACD Elektronik if required.

Would you like to see our Electric Height Adjustment in action? Then take a look at our YouTube channel and see for yourself. [Click here for the video.](#)

ACD All-in-One

The ACD All-in-One is ACD Elektronik's all-round carefree package for firmware, operating systems, ACD apps and programs. An ACD All-in-One contract gives you extended access to our download portal and the latest information, upgrades and updates are always available to you. With the ACD All-in-One you are always up to date.

The following new features are available on our download portal:

- There is a new version V1.34 of the **ACD KioskMode**, which has been visually and technically revised to further improve the usability of the ACD KioskMode.
- We have also updated the **ACD HasciDataService** and a new version, V1.72, is now available to download from the customer portal.
- The first image for our **MFT1xSE** vehicle mount terminals with Windows® 11 IoT Enterprise is now available to download from the customer portal.
- There is also a new image with some optimizations for the **M2Smart® SE**. For the current version 2.3, the release notes including history are now also available for a better overview.
- Due to the platform concept in device development, there is also a new image for the **M270SE**. The optimizations have been incorporated into version V2.3 and the release notes including history are now also available for a better overview.
