

Outline data for the calculation

Number of shifts per day*

i Number of eight-hour shift per work day

Work days per week*

i Days per average work week

Wage costs per hour (euros)*

i Personnel costs per working hour

Investment for mobile workstations

MAX base price (euros)*

i Investment costs for mobile workstations

Price for accessories (euros)*

i Investment costs for additional accessories

Net purchase price (euros)

0,00

i Calculated field

Savings

Time saved per hour (min)*

i Time spent per hour that can be saved with the mobile workstation (for example time spent walking to and from a stationary printer)

Savings per year (euros)

0,00

i Calculated field

Result

RoI in months

0,00

i Return on Investment = amortization time of the mobile workstation

*Mandatory fields

Reset RoI

Print RoI

Net purchase price

Net purchase price = MAX base price + Price for accessories

Savings per year

$$\text{Savings per year} = \frac{\text{Time savings}}{60} \times 8 \text{ Hours} \times \text{Number of shifts} \\ \times \text{Work days per week} \times 52 \text{ Weeks} \times \text{Wage costs}$$

Rol in months

$$\text{Rol in months} = \frac{\text{Net purchase price}}{\text{Savings per year}} \times 12 \text{ Months}$$
