

BENEFITS OF MOBILE WORKSTATIONS FOR WAREHOUSES

When integrated into warehouses, mobile workstations – such as the MAX line of mobile workstations – provide a number of benefits that improve profitability, including:

1 Increased productivity

Mobile workstations allow employees to take their workstation with them between locations in the warehouse, thereby reducing the amount of time spent walking back and forth between the workstation and supplies.

2 Enhanced data access

Since the workstation is immediately available, workers can easily access the information they need to ensure accurate order fulfillment and documentation of shipping and returns.

3 Simplified receiving and shipping operations

Docking and shipping are much easier without the need for travel between different areas of the warehouse for products, materials, and documentation. A mobile workstation allows warehouse workers to keep everything together, for more streamlined shipping and receiving processes.

4 Reduced potential for error

With all of the pertinent data immediately available, workers are less likely to overlook, forget, or misinterpret information, thereby reducing the potential for errors in shipping, returns, and inventory checks.

For more information about mobile workstations and how they benefit warehouse operations, turn to ACD Group.
